

Comments on Great Panther Silver Ltd. in today's Gold Report

[Great Panther Silver Ltd. \(TSX:GPR\)](#) "my very top overall silver recommendation"

- *The Gold Report* Interview with Brien Lundin

Dear Shareholders and Friends,

In a recent interview with Streetwise Reports, *Gold Newsletter* Editor and Publisher Brien Lundin, commented on Great Panther Silver. In this exclusive Gold Report interview, Brien—who also hosts the New Orleans Investment Conference—says that mounting troubles in Euroland threaten to end the traditional inverse correlation between the price of gold and the value of the U.S. dollar. Of course the dollar decoupling can only go so far. "Gold stands as the one currency that governments cannot debase or debauch," Brien says, but "the dollar is the only currency accepted by margin clerks."

With a career spanning three decades in the investment markets, Brien Lundin serves as president and CEO of Jefferson Financial, a highly regarded publisher of market analyses and producer of investment-oriented events. Under the Jefferson Financial umbrella, Brien publishes and edits *Gold Newsletter*, a cornerstone of precious metals advisories since 1971; he digs into not only small caps of every type but also macroeconomics and geopolitical issues that ultimately affect every resource investor.

Robert A. Archer
Chief Executive Officer & President

Brien Lundin's Comments:

"Great Panther Silver may be my very top overall silver recommendation. The key to that company is its great management and its primary project, the Guanajuato Mine. That mine has been exploited for close to 500 years, but previous production was halted and previous exploration stopped at the water line. The big thing that's happening—the key to Great Panther's potential—is the fact that they're now using modern technology and exploration techniques to identify resource where no end has been found yet.

Historically, close to 500 million ounces (Moz.) were produced from that district, and they have the potential to expand dramatically the resources that are known now by drilling in and developing areas that were inaccessible for hundreds of years previously. The company is generating profits and plans to

essentially double its production over the next couple of years. Actually, the timeframe goes much longer than that. I think Great Panther has huge potential in silver production." [View Article](#)
